

# General Navigation

# Granny Gertrude using the Flexible Cookbook app.

## Home Page

- Granny Gertrude opens her app, sees her most list, and taps the button to add a new recipe.

## Input Page

- Granny Gertrude enters the ingredients, mostly from memory, but checks her paper cookbook once or twice. She taps "submit" to save her recipe.

## Home Page

- Granny Gertrude finds herself on the Home Page again, and can see the new recipe she just entered. She taps it.

## Specific Recipe

- She then uses the specific recipe that she just entered, but still only has to refer to it a couple of times. When it's done, she wants to take a picture of it, so she taps on the "edit" button, like her daughter had shown her.

## Input Page

- Back to the input page, Granny selects the "images" tab. And then the "+" button to add a picture.

## Camera Function

- Granny takes a picture and saves it in the recipe.

(Adding images to her recipe is the Stretch Feature)

- When her family comes to visit, she pulls out her phone to show them the pictures of her most recent cooking masterpiece.

# Teenage Tom using the Flexible Cookbook app.

## Home Page

- Teenage Tom opens his Flexible Cookbook app, and sees his list of four recipes. He taps the popcorn recipe.

## Specific Recipe

- Tom reads the instructions briefly, and goes back to the ingredient list.

## Specific Recipe

- Tom sees that he is supposed to put  $\frac{1}{2}$  cup of popcorn kernels in the popper kettle, but he can't find the  $\frac{1}{2}$  cup measuring cup.

## Specific Recipe

- So he pulls out a random glass cup with ounces marked on it. He uses the slider bar to change the units of measure from cups to ounces. Now it says 4 ounces.

## Specific Recipe

- He uses the slider to change tablespoons to teaspoons, and now he can complete the recipe.

## Specific Recipe

- The recipe calls for  $\frac{1}{2}$  tablespoon of flavored salt. But Tom has just used the measuring spoon and he doesn't want to clean the oil out of it. So he finds another spoon, which says "1 tsp."

## Specific Recipe

- Tom uses the slider to change  $\frac{1}{4}$  cup to 4 tablespoons. He adds 4 tablespoons of oil to the popcorn kettle.

## Specific Recipe

- Tom also needs  $\frac{1}{4}$  cup of vegetable oil. He still can't find any measuring cups but he has found a measuring spoon which says "1 Tbsp."
